\*corresponde à qualidade comercial, que inclui o isómero maior 4-(4-hidroxi-4-metilpentil)-3-ciclo-hexeno-1-carboxaldeído e o isómero menor 3-(4-hidroxi-4-metilpentil)-3-ciclo-hexeno-1-carboxaldeído.

Esta lista é composta pelos “alergénios de fragrâncias” identificados pelo SCCNFP e pela Cosmetics Europe (ex-COLIPA). Trata-se de concentrações calculadas que não substituem a quantificação cromatográfica em lotes individuais. “<1ppm” indica que a substância não foi diretamente adicionada. Pode ainda surgir como impureza em ingredientes sintéticos ou naturais adicionados a níveis inferiores a 1ppm.
